NOTABLE OPEN-SOURCE CONTRIBUTIONS

- International Dataset of Flaky Tests (IDoFT)
 - IDoFT is a public dataset for flaky-test research. I integrated **170 timing-dependent (TD) flaky tests and 1,900+ order-dependent (OD) related flaky tests**. IDoFT is available <https://github.com/TestingResearchIllinois/idoft> (My GitHub ID shanto-rahman).
- TSVD4J
 - I present TSVD4J, a Maven plugin for detecting thread-safety violations in Java applications. TSVD4J integrates with any Maven project, runs the project's test suite, and analyzes runtime behavior to expose data races. TSVD4J is evaluated on 12 Java applications, and identified **55 data race pairs** indicative of data race bugs. Compared to RV-Predict, TSVD4J detects more data race with similar runtime, largely due to its explicit tracking of field accesses. I presented TSVD4J at ICSE Demo'23. Repository is <https://github.com/UT-SE-Research/TSVD4J>.
- OptCD
 - I develop OptCD, a dynamic analyzer for CD pipelines that traces build outputs to expose unused artifacts and wasted work. In evaluation, OptCD enables required changes for **72.0% of unused directories**. OptCD is presented at ICSE Demo'25. I submitted 26 GitHub pull requests to open-source Maven projects (e.g., google/open-location-code, junit-team/junit4, JSQlParser/JSqlParser), with **12 accepted**. <https://github.com/software-research/optCD-demo>.

- FlakeSync
 - I present FlakeSync, a technique for automatically repairing async flaky tests by introducing synchronization for a specific test execution. The evaluation is on known flaky tests from a prior dataset shows that FlakeSync can automatically repair 83.75% of the async flaky tests. I presented this paper in ICSE'24. I submitted 10 pull requests based on FlakeSync's patches, with **3 accepted pull requests** and none rejected thus far. The repository is <https://github.com/UT-SE-Research/FlakeSync>.
- FlakeBench
 - I present FlakeBench, a dataset for identifying the root causes of flaky tests via fine-tuning a large language model (LLM). The dataset contains 8,574 tests: 280 flaky and 8,294 non-flaky. Of these 280 flaky tests, async wait (76), concurrency (37), time (33), order dependent (41) and unordered collection (93) are five different flaky tests. I presented this dataset at OOPSLA'25. The repository is <https://github.com/UT-SE-Research/FlakyLens>.
- Syn-Bench
 - We present Syn-Bench, a dataset that is used for repairing change-induced test breakage. The main intuition is that code changes happen but test is out-dated, results in spurious assertion failure, and reduced code coverage. This Syn-Bench consists of 352 unit tests with assertion failure and 369 unit tests with reduced code coverage due to changes in the focal methods from 44 projects. I presented this dataset in OOPSLA'25. The repository is <https://sites.google.com/view/utfix>
